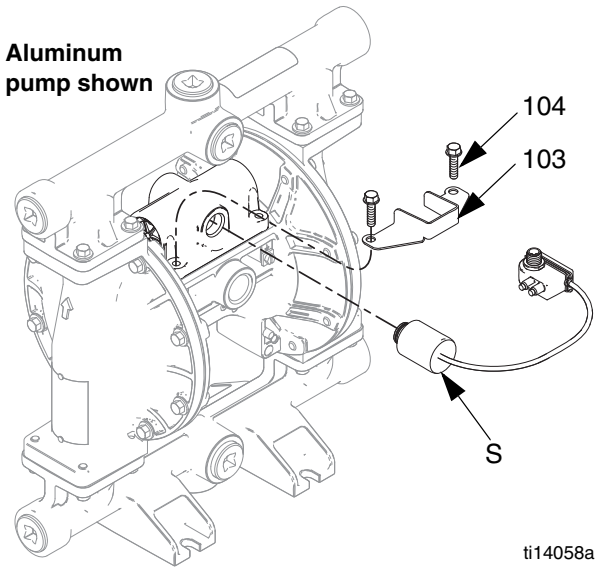
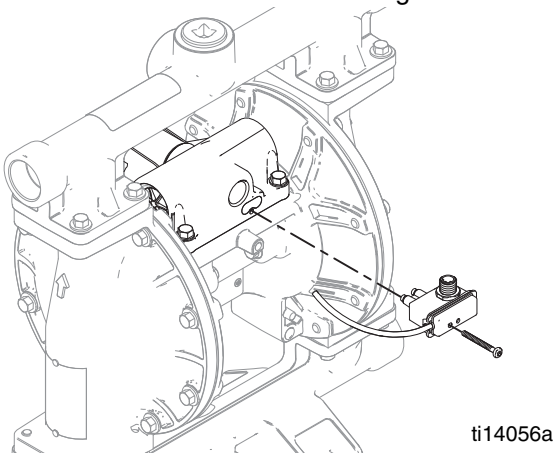
# Installation

**NOTE:** These kits are intended to replace a reed switch/solenoid assembly. Contact your distributor to order the correct conversion kit to add monitoring capabilities.

1. Attach the solenoid (S) and bracket (103) to the air valve. Use the same screws (104) that attach the air valve to the center housing, as shown.



2. Use the screw provided to attach the reed switch just behind the air inlet. Remove the muffler, if needed, for easier access. Rotate the air inlet fitting as needed so the wrench flat clears the reed switch.



3. Connect the DataTrak cable to the 5-pin connector on the reed switch. Reconnect the air line to the motor.
